

Two Plots about NBA Forecasting

Nannan Peng

2/7/2021

Note: Feel free to use the plots in class and attach my name.

The two plots check the efficacy of the forecasting chances of winning. The first plot is the relationship between the average forecasting chance and the winning percentage across teams. The second plot is the relationship between the average forecasting chance and the average point differential across teams.

Figure 1. Mean forecasting chance vs. winning percentage

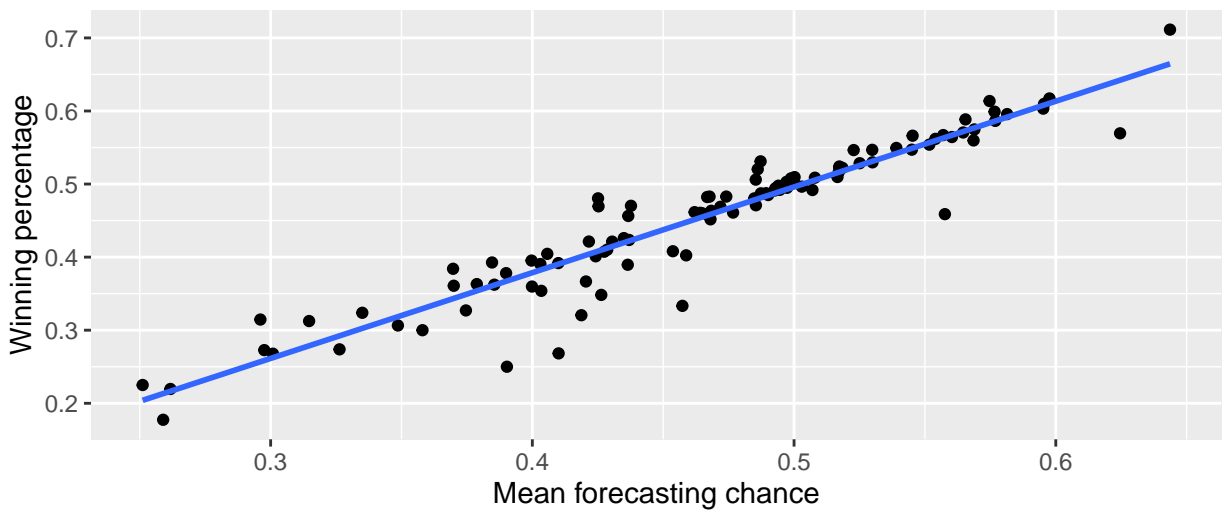

Figure 2. Mean forecasting chance vs. mean point differential
